II. CLAIM AMENDMENTS

1. (currently amended) A system comprising:

a plurality of mobile terminals, each being provided with an application for ~~acquiring~~ using personal content, and a transmitter and receiver for wireless communication with a telecommunications system, said personal content including at least one of photographs, text, video, speech, calendar information, and location information;

a memory in the mobile terminal for storing at least a first part of the personal content ~~acquired~~ to be used;

at least one remote data repository connected to the telecommunications system for storing at least a second part of the personal content ~~acquired by the mobile terminals~~ to be used, wherein at least one of the repositories is assigned for the use of each mobile terminal;

~~an~~ said application further being adapted for selecting said at least a second part of the personal content and transferring it between the memory and the at least one remote data repository through said telecommunications system, the application including predetermined criteria, the fulfilment of which, initiates said transfer;

an extraction block for extracting data from said at least a first part of the personal content and an association block for associating said extracted data with said at least a second part of the personal content; and

a service provision block responsive to said association block to generate and/or provide a personalized service incorporating ~~at least one of said photographs,~~

~~text, video, speech, calendar information, and location information~~ a combination of the first part of the personal content and the second part of the personal content which have been associated with each other by the association block. ~~using said extracted data associated with said at least a second part of the personal content.~~

2. (previously presented) A system according to claim 1, the system further comprising

   a selection block for selecting data to be retrieved from an external data storage, the selection being made at least partially on the basis of said extracted data,

   a receiver for receiving said selected data, and

   an association block adapted to associate said received data with the personal content stored in the data repository,

   wherein the service provision block is arranged to utilize said received data for generating and/or providing said personal service.

3. (previously presented) A system according to claim 1, the system further comprising

   a data retrieval block from retrieving at least one stored object and/or item of data extracted from the remote data repository and

   a server including application software for performing an action as a result of which information is generated, the action to utilize the retrieved object and/or said data extracted.

4. (previously presented) A system according to claim 1, the system further comprising memory for storing said extracted information in said remote data repository.

5. (previously presented) A system according to claim 1, the system further comprising a billing system for generating charging information on the basis of an action performed.

6. (previously presented) A system according to claim 3, the system further comprising

   a subscription management block for receiving a subscription request at a server and processing said request on said server, and

   a data retrieval and selection block responsive to said processing to allow access of the application software to an object and/or stored information in the remote data repository.

7. (previously presented) A system according to claim 3, the system further comprising

   a subscription management block for receiving a subscription request at a server and processing said request on said server, and

   a service provision block responsive to said processing to send an object and/or extracted information in the remote data repository to the server in order to enable provision of the service requested.

8. (previously presented) A system according to claim 6, wherein the service requested is identified in the request.

9. (previously presented) A system according to claim 6, wherein an object and/or extracted information is identified in the request, the object and/or extracted information defining the action to be performed by the server.

10. (previously presented) A system according to claim 2, wherein

said service includes a personal magazine in a paper and/or digital format and said received data comprising at least one item of the following data: i) calendar information, ii) image/video information, or iii) location information of the user and

said selected data received from the external data storage includes information to be laid out in the personal magazine.

11. (previously presented) A system according to claim 10, wherein the selection block is arranged to use at least date information extracted from said personal content in order to select objects and/or extracted data from the time interval to be laid out in the personal magazine.

12. (previously presented) A system according to claim 4, wherein said extraction block for extracting data from said personal content includes at least i) optical character/text recognition or ii) pattern recognition.

13. (currently amended) A method comprising:

acquiring personal content in a mobile terminal, said personal content including at least one of photographs, text, video, speech, calendar information, and location information;

storing at least a first part of said personal content in the mobile terminal;

selecting and transferring through a telecommunications system at least a second part of the personal content between the mobile terminal and a remote data repository, the transfer to be initiated when predetermined criteria are fulfilled,

storing the transferred personal content in the remote data repository,

assigning at least one of the repositories for the use of each of the terminals, and providing the repositories with a processor for accessing the personal content from at least one terminal,

extracting data from said at least a first part of the personal content,

associating said extracted data with said at least a second part of the personal content,

in response to said associating step, generating a personalized service incorporating ~~at least one of said photographs, text, video, speech, calendar information, and location information~~ a combination of the first part of the personal content and the second part of the personal content which have been associated with each other by the association block,~~and using said extracted data associated with said at least a second part of the personal content,~~

providing said personalized service to the user.

14. (previously presented) A method according to claim 13, the method further comprising:

selecting data to be retrieved from an external data storage, the selection to be made at least partially on the basis of said extracted data,

receiving said selected data,

associating said received data with the personal content stored in the data repository, and

providing a service, the service to utilize said received data.

15.   (previously presented) A method according to claim 13, the method further comprising:

retrieving at least one stored object and/or item of data extracted from the remote data repository and

performing an action as a result of which information is generated, the action to utilize the retrieved object and/or said data extracted.

16.   (previously presented) A method according to claim 13, the method further comprising storing said extracted information in said remote data repository.

17.   (previously presented) A method according to claim 13, the method further comprising generating charging information on the basis of an action performed.

18.   (previously presented) A method according to claim 15, the method further comprising:

subscribing to a service by sending a request to a server,

processing said request, and

in response to said processing, allowing application software to access an object and/or stored information in the remote data repository.

19.   (previously presented) A method according to claim 15, the method further comprising:

subscribing to a service by sending a request to a server,

processing said request, and

in response to said processing, sending an object and/or extracted information to the server to provide the service requested.

20. (previously presented) A method according to claim 18, wherein the service requested is identified in the request.

---

21. (previously presented) A method according to claim 18, wherein an object and/or extracted information is identified in the request, the object and/or extracted information defining the action to be performed by the server.

22. (previously presented) A method according to claim 14, wherein

said service includes a personal magazine in paper and/or digital format, said received data to comprise at least one item of the following data: i) calendar

information, ii) image/video information, or iii) location information of the user and

said selected data retrieved from an external data storage includes information to be laid out in the personal magazine.

23. (previously presented) A method according to claim 22, wherein in the selection step at least date information extracted from said personal content is used in selecting objects and/or extracted data from the time interval to be laid out in the personal magazine.

24. (previously presented) A method according to claim 16, wherein said extracting of data from said personal content includes at least performing i) optical character/text recognition or ii) pattern recognition.

25. (currently amended) An apparatus comprising:

an extraction block for extracting data from personal content stored in a mobile terminal

an association block for associating said extracted data with personal content stored in at least one remote data repository assigned to the mobile terminal, said personal content including at least one of photographs, text, video, speech, calendar information, and location information; and

a service provision block responsive to said association block to generate and/or provide a personalized service incorporating at least one of said photographs, text, video, speech, calendar information, and location information a combination

of the extracted data and the personal content stored in the at least one remote data repository which have been associated with each other by the association block. ~~and using said extracted data.~~

26.   (previously presented) An apparatus according to claim 25, further comprising a selection block for selecting personal content for the personalized service.

27.   (previously presented) An apparatus according to claim 25, further comprising a daemon for activating the service provision block.

28.   (previously presented) An apparatus according to claim 25, further comprising definitions comprising information on requirements posed by the personalized service and different options for service requests.

29.   (currently amended) A method comprising:

extracting data from personal content stored in a mobile terminal

~~associating said extracted data with personal content stored in at least one remote~~ data repository assigned to the mobile terminal, said personal content including at least one of photographs, text, video, speech, calendar information, and location information; and

generating and/or providing a personalized service incorporating ~~at least one of said photographs, text, video, speech, calendar information, and location information~~ a combination of the extracted data and the personal content stored in the at least one remote data repository which have been associated with each other by the association block.~~using said extracted data.~~

30. (previously presented) A method according to claim 29, further comprising selecting personal content for the personalized service.

31. (previously presented) A method according to claim 29, further comprising activating the service provision block.

32. (previously presented) A method according to claim 29, further comprising storing definitions comprising information on requirements posed by the personalized service and different options for service requests.

33. (currently amended) A computer program product for executing an application for providing personalized services on a processor of a mobile terminal comprising:

a ~~processor usable~~ computer storage medium having processor readable program code embodied therein, the processor readable program code further comprising:

processor readable program code for extracting data from personal content stored in a mobile terminal

processor readable program code for associating said extracted data with personal content stored in at least one remote data repository assigned to the mobile terminal, said personal content including at least one of photographs, text, video, speech, calendar information, and location information; and

processor readable program code responsive to said association ~~block~~ to generate and/or provide a personalized service incorporating ~~at least one of said photographs, text, video, speech, calendar information, and location information~~

<u>a combination of the extracted data and the personal content stored in the at</u> <u>least one remote data repository which have been associated with each other by</u> <u>the association block.</u> ~~and using said extracted data.~~

34. (previously presented) A computer program product according to claim 33, further comprising a selection block for selecting personal content for the personalized service.

35. (previously presented) A computer program product according to claim 33, further comprising a daemon for activating the service provision block.

36. (previously presented) A computer program product according to claim 33, further comprising definitions comprising information on requirements posed by the personalized service and different options for service requests.
